On the Interaction of
Elementary Particles. I.
By Hideki Yukawa.

§ 1. Introduction

At the present stage of the quantum theory little is known about the nature of interaction between elementary particles. For example, the ^{interaction} ~~force~~ acting between a neutron and a proton whether is an ordinary attraction force or an ^{exchange} ~~exchange~~ "Platzwechsel" interaction first proposed by Heisenberg. Recently Fermi⁽¹⁾ has treated the problem of β -ray disintegration on the hypothesis of the existence of "neutrino". According to his theory a neutron and a proton can interact by emitting and absorbing a neutrino and an electron. Unfortunately the energy of interaction calculated on this such assumption⁽²⁾ is much too small to account for the binding of neutrons and protons in the nucleus. To remove this defect we ^{may} ~~can~~ modify the theory of Heisenberg or Fermi in the ^{next} ~~following~~ way.

The transition of a heavy particle from a neutron state to a proton state is not always accompanied

⁽¹⁾ E. Fermi, Zets. f. Phys. 88, 161, (1934).
⁽²⁾ J. J. Thomson, Nature, 133, 981 (1934); D. Swanecko, ibid., 981 (1934).

Yukawa's handwritten manuscript of his first paper proposing Meson Theory.

A Memorial of Meson Theory place at its birth place, Kurakuen, erected in 1985.

KYOTO INTERNATIONAL SYMPOSIUM: THE JUBILEE OF THE MESON THEORY 15-17 AUGUST 1985

Preface

Kyoto International Symposium: The Jubilee of the Meson Theory (MESON50) was held at Kyoto International Conference Hall on August 15-17, 1985, under the auspices of the Research Institute for Fundamental Physics (RIFP), the Faculty of Science, and the College of Liberal Arts of Kyoto University, in cooperation with the Physical Society of Japan, the Faculty of Science of Osaka University, the Institute for Nuclear Study and the Institute for Cosmic Ray Research of the University of Tokyo, the National Laboratory for High Energy Physics (KEK), and the Yukawa Foundation.

Meson Theory was proposed by Hideki Yukawa (1907-1981) in 1935, namely, only a decade after the birth of quantum mechanics. At that time, much confusion prevailed about the applicability of quantum theory. Yukawa's Meson Theory indicated the right direction for developing particle physics: It established that quantum field theory is the correct theory even inside a nucleus, it explained how to describe nuclear force at the fundamental level, and it clarified the necessity of distinguishing strong and weak interactions. Thus one may say that particle physics began with Yukawa's Meson Theory.

The purpose of this Symposium were firstly, of course, to celebrate the 50th Anniversary of Yukawa's Meson Theory, secondly to review the development of particle physics during these fifty years and the application of meson physics to various fields, and thirdly to discuss current topics in particle physics in order to obtain some insight into its future progress in the fundamental theory of space-time and matter.

The participants of this Symposium were 88 foreign physicists from 18 countries and 172 Japanese scientists, and 32 interesting talks were given as shown in the Programme. All participants enjoyed fruitful discussions and conversations. The Symposium was quite successful; this success was due to the cooperation of the participants, the members of the Advisory and the Organizing Committees, and the scientific secretaries and assistants.

Finally, the Editors would like to thank the invited speakers of this Symposium for the prompt submission of their manuscripts.

Masako Bando
Rokuo Kawabe
Noboru Nakanishi
Editors of the Proceedings of MESON50

Acknowledgements

The Organizing Committee of the MESON50 Symposium would like to express their sincere thanks to the financial supports given by the Ministry of Education, Science and Culture, the Yukawa Foundation and many other foundations and private companies which include

Asahi Shimbun
Bunkyo Co., Ltd.
Fujitsu Ltd.
Gakujutsutosho Shuppansha
Hitachi Ltd., Central Research Laboratory
Iwanami Shoten, Publishers
Japan Atomic Industrial Forum Inc.
Japan Broadcast Publishing Co., Ltd.
Japan Broadcasting Corporation (NHK)
Kanegafuchi Chemical Industry Co., Ltd.
Kodansha Ltd.
Korakudo Co., Ltd.
Maruzen Co., Ltd.
Murata Mfg. Co., Ltd.
Nissin Electric Co., Ltd.
Nuclear Safety Research Association
Sanyo Electric Co., Ltd.
Sekisui Homes Ltd.
Shimadzu Science Foundation
Susumu Co., Ltd.
The Kajima Foundation
The Kyoto Shimbun
The Nihon Keizai Shimbun (Japan Economic Journal)
Toyota Motor Corporation
Urasenke

Ziro Maki, Chairman
Zensuke Tokuoka, Secretary General
of the Organizing Committee

CONTENTS

Preface	i
Acknowledgements	iii
Welcome	Toshio Sawada 1
Opening Address	Ziro Maki 2
The Birth of the Yukawa Theory	Minoru Kobayasi 6
The Development of the Yukawa Theory of Nuclear Forces.....	Herbert Fröhlich 9
Remarks on the 1935 Paper of Yukawa	Chen Ning Yang 11
How Yukawa Arrived at the Meson Theory	Laurie M. Brown 13
Remarks on the Establishing the Theory of Nuclear Forces (Expanded version of Chairman's comment)	Dmitri Ivanenko 20
Cosmic-Ray Study of Mesons	Satio Hayakawa 27
From Mesons to Quarks in Nuclei — <i>50 Years of Nuclear Physics</i> —	
.....	Toshimitsu Yamazaki 35
Mesons and Field Theory	Kazuhiko Nishijima 43
The Sakata Model and Its Succeeding Development toward the Age of New Flavours	Shuzo Ogawa 52
Yukawa Meson, Sakata Model and Baryon-Lepton Symmetry Revisited	
.....	Robert E. Marshak 61
Physics with the L3 Detector	Samuel C. C. Ting 75
Directions of Particle Physics	Yoichiro Nambu 104
The Pion Mass : Looking for Its Origins	Roberto D. Peccei 111
Dynamical Gauge Bosons and Hidden Local Symmetries	
.....	Taichiro Kugo, Haruhiko Terao and Shozo Uehara 122
Do Two Jet Events in e^+e^- Collision Observe KNO Scaling?	
.....	T. T. Chou and Chen Ning Yang 136
Toward the Origin of Quark Masses and Mixing	Makoto Kobayashi 138
Physics of Heavy Quark Decays and CP Violation	Ling-Lie Chau 147
LAMPF — Its Origins, History, and Accomplishments	Louis Rosen 168
Recent Achievements in Meson Sciences at TRIUMF	Erich Vogt 190
The Swiss Institute for Nuclear Research (SIN) : Status, Achievements, Future Plans	Jean P. Blaser 204
Radiobiological Background for Negative Pion and Heavy Ion Therapy on Cancers	Kiyohiko Sakamoto 214
Field Theory of Strings	Bunji Sakita 222
Effective Actions in String Theory	Keiji Kikkawa and Masami Yamasaki 228
Supercomputers and Quantum Field Theory	Michael Creutz 237

Chiral Symmetry Breaking in Quantum Field Theory	Thomas W. Appelquist	244
Anomalies	William A. Bardeen	250
Cosmological Constant in Two-Dimensional Gravity	Tamiaki Yoneya	256
Higher Dimensions, Supersymmetry, Strings	Peter G. O. Freund	264
Black-Hole Radiation	Tsung Dao Lee	271
Particle Physics and Cosmology	Andrei Linde	279
Reflections on Hideki Yukawa and the Meson 50 Symposium (Closing address)	Richard H. Dalitz	293
The Scientific Programme		297
Members of Committees		300
List of Participants		301
Appendix : Yukawa's Two Unpublished Articles on the Meson Theory		307
